Professional Summary

Backend Software Engineer with **3.1 years** of experience building large-scale microservices for enterprise retail e-commerce platforms. Experienced in Java, Spring Boot, Kafka, IBM MQ, MongoDB, Redis, and distributed systems with expertise in event-driven architecture, real-time inventory management, automated pricing, and high-throughput backend services.

Technical Skills

Languages: Java 8, Java 21, SQL

Frameworks: Spring Boot, Spring Cloud, Spring MVC, Spring Data JPA, Hibernate

Messaging: Apache Kafka, IBM MQ (JMS), Event-Driven Architecture

Databases: MongoDB, PostgreSQL, Redis

Tools: Git, Maven, Swagger/OpenAPI, OpenFeign, Resilience4j, Log4j2

Concepts: Microservices, Distributed Systems, REST APIs, Multithreading, Distributed Locking, Design Patterns

Professional Experience

Software Developer

Jun 2023 – Present

Avenue E-Commerce (DMart Ready), Mumbai

Project: Inventory Executor – Inventory Automation Framework

- Designed and developed Inventory Executor, an inventory automation framework using **Java 8, Spring Boot, Kafka, IBM MQ, MongoDB, and Redis** to automate stock management, article onboarding, selling price updates, and real-time inventory execution across 50+ fulfillment centers.
- Built event-driven workflows for RTAM, SAP, and MRP processing with configurable retry mechanisms, asynchronous execution, and dead-letter handling for reliable high-volume message processing.
- Engineered distributed schedulers using Redis (Redisson) locking and multi-instance MongoDB architecture to ensure exactly-once execution across clustered deployments.
- Developed asynchronous processing pipelines using ThreadPoolTaskExecutor, improving throughput and scalability for inventory operations.
- Collaborated with product, QA, and operations teams for requirement analysis, production deployments, code reviews, and root cause analysis of production incidents.

Project: Right Price Engine — Real-Time Competitive Pricing Platform

- Designed and developed a greenfield pricing microservice using **Java 21, Spring Boot 4, Spring Cloud, Apache Kafka, MongoDB, and Redis** to automate competitive pricing for **50K+ articles**.
- Built a configurable rule-based Price Decision Engine supporting automated price increase, decrease, hold, approval, and skip workflows based on business rules and competitor pricing.
- Developed Kafka producer and consumer pipelines with asynchronous event processing and integrated with **3+ microservices** using Spring Cloud OpenFeign and Resilience4j for fault-tolerant communication.
- Implemented Redis distributed locking and cache-aside strategy using Redisson to coordinate scheduled jobs across multiple application instances.
- Leveraged Java 21 Virtual Threads, Redis caching, MongoDB indexing, secure REST APIs, audit trails, and configuration-driven pricing modules to build a scalable revenue-critical pricing platform.
- Owned complete feature development lifecycle including requirement analysis, low-level design, implementation, testing, deployment support, and production issue resolution.

Education

PG Diploma in Advanced Computing (A Grade)

Centre for Development of Advanced Computing (C-DAC), Nashik

Sep 2022 – Feb 2023

Bachelor of Engineering (Mechanical Engineering)

Savitribai Phule Pune University, Pune

Aug 2016 – Jul 2021
